

SSE & CASB Modernization

This healthcare client turned to ANM to cut through the noise, compare modern SSE solutions, and find the best fit for their specific compliance and cloud data protection requirements.

Client Challenge

Despite investing in a suite of security tools, a national healthcare provider lacked visibility into their environment and couldn't effectively identify risks. Their top concern was data leakage, especially as more workloads moved to cloud platforms.

They needed a way to assess and modernize their security suite to address this exposure across a distributed, high-compliance environment.

ANM Engagement

- Partnered with the client to run proof-of-concept (PoC) comparisons
- Evaluated leading Secure Services Edge (SSE) providers
- Focused on Cloud Access Security Broker (CASB) capabilities
- Advised on solution selection and deployment roadmap

The Solution

- Conducted CASB-focused PoCs for top SSE platforms
- Validated solution performance against data leakage risks
- Recommended Netskope to meet client's national security needs
- Guided deployment to accelerate time-to-value

With ANM's help, the client quickly deployed a tailored SSE solution that addressed cloud security and data leakage head-on.

They now have the visibility and control needed to confidently and efficiently protect sensitive data across their enterprise.
