anm

Define your custom path to the cloud

The digital age has redefined data center demands. New ways of working require real-time access, process automation and next-level security. Your path to the cloud must be unique, balancing existing infrastructure needs with future technology requirements. At ANM, we create your custom path to the cloud. We start with comprehensive assessments and provide ongoing consulting to solve your storage, compliance, infrastructure and disaster-recovery challenges.

Questions to consider:

› How are you managing disaster recovery today?

› How are you handling storage?

› Does it make sense to move to cloud storage?

› What greenfield software applications are on your roadmap?

› Instead of buying more hardware, would it make sense to go to the cloud?

› Would it make sense to move applications you only use at certain times of the year to the cloud?

> **Adoption of cloud-managed networks will double by the end of 2023.** - Gartner

We offer:

› Networking solutions that facilitate migration to the cloud

› Cloud backup as a service

› Cloud infrastructure as a service

› Hybrid cloud solutions

› Storage solutions

› DevOps

› Data center evacuation

› Data center automation and modernization

› Disaster recovery

› AWS cloud consulting

› Security solutions

› VMware cloud on AWS

› Managed cloud services

WHAT SETS US APART

› Understanding of your legacy systems

› SD-networking (ACI and NSX expertise) to automate your data center

› Secure implementation of an on-prem, cloud or hybrid solution that is right for your organization.

› AWS assessments as an Advanced Tier Consulting partner

› Hyperconverged expertise

WHAT YOU CAN EXPECT

› Pay-as-you-go subscriptions to expand your technology offering and reduce costs

› Higher productivity and efficiency through secure data storage and sharing

› Increased protection against infrastructure failure

› Infinite scale for large data requirements

Networking solutions

Our cloud networking practice helps you migrate existing on-premise networking equipment – including multi-platform networking. This includes secure connectivity using VPN over the internet, high-speed dedicated links and software-defined wide area networking (SD-WAN).

AWS consulting

We review, support and advise Amazon Web Services (AWS) clients, including:

AWS assessments

We make overall architecture and design recommendations, and conduct infrastructure security, network design and automation reviews. We find ways to minimize your cost, including EC2 sizing, network pricing and s3 tiering options.

DevOps

We look for opportunities to automate manual processes and infrastructure. These services also simplify provisioning, deployment, software releases and performance monitoring.

Cloud migrations

We audit your existing infrastructure to understand your current stack, then design the best strategy for your cloud migration.

VMware Cloud on AWS

VMware Cloud on AWS (VMC) is an integrated cloud offering used to migrate and extend on-premise VMware vSphere-based environments to the AWS Cloud. As a VMware Premier Solution Provider partner, we have the highest level of designation for VMware solution providers, offering complete services including:

› Data center evacuation
› Large virtual desktop (VDI) deployments
› Disaster recovery
› Test dev for legacy applications

Hyperconverged expertise

Hyperconvergence is an IT framework that combines storage, computing and networking into a single system. We work with leading solutions like Cisco Hyperflex to reduce data center complexity and increase your scalability.

Cisco Application Centric Infrastructure

We bring expertise in Cisco ACI to facilitate your data center refresh or new build. This solution works with multi-pod, multi-site and remote leaf data center strategies, maintaining a consistent policy model. This gives the flexibility to move applications seamlessly to any location/cloud, while maintaining security and high availability.

ADDITIONAL SOLUTIONS

ANM also specializes in cloud security appliances, collaboration tools and audio-visual solutions. Ask us about these additional offerings to complement your cloud and data center strategy.

Data center solutions

Our additional data center solutions ensure business continuity, including secure, cost-effective backup, as well as extension of existing virtual environments.

Business continuity

We help prepare your business for disaster recovery, including system maintenance and ways to circumvent interruptions and loss.

Cloud backup-as-a-service

This service helps you back up critical applications using a virtual or physical host. Usage-based pricing and contracts also make this a cost-effective option.

Cloud infrastructure-as-a-service

Hybrid cloud strategies may extend these environments to access additional CPU, memory and storage capacity as needed.
