

Manage risk from every angle

Securing data and keeping it private is one of our industry's most complex challenges. You are tasked with driving productivity, collaboration and remote access, but what about the risks? How do you embrace innovation and cloud-based technologies that create a data-centric security program? We understand these pressures. That's why security isn't just a service we offer — it's part of everything we do.

Questions to consider:

- › How quickly can you detect, respond and recover from threats before data is compromised?
- › What are you doing to keep up with evolving threats and keep your data secure?
- › When was your last risk assessment?
- › How are you managing network access?
- › How do you protect data across a mobile workforce?

Security isn't just a service we offer — it's part of everything we do. - Chris Hammer,

Vice President, Security & Managed Services

We offer:

- › Security product architecture and implementation, including next generation firewalls, IPS, network traffic monitoring, identity and device management, endpoint detection and response solutions, secure access and DNS protection
- › Assessments, including: security program and architecture reviews, device configurations, network vulnerability and penetration testing
- › Cloud security consulting and architecture
- › Enterprise incident management and response
- › Information risk management and compliance
- › Compliance-based remediation
- › Virtual CISO services
- › Threat modeling

WHAT SETS US APART

- › Risk based security approach utilizing integrated security platforms
- › Thorough security reviews that identify your unique risks
- › Security automation utilizing Cisco Identity Services Engine (ISE) and integrated platforms
- › Architecting and deploying Zero Trust Networks
- › Developing custom apps on platforms like Splunk to address your unique risks and enhance your security capabilities

WHAT YOU CAN EXPECT

- › End-to-end, services-led solution including firewalls, endpoint detection and response, open-source intelligence software, managed security services and Virtual CISO services
- › Peace of mind knowing that our in-depth risk assessment, risk management and security compliance solutions offer you the highest level of protection
- › Local, personalized support
- › Solutions that are focused on results and your unique business risks

Reduce your risk with cybersecurity peace of mind

Our work begins by diving in and examining your unique risks. We specialize in technology-specific safeguards and developing solutions to ward off attacks in real time and mitigate threats before they happen. You'll have complete confidence that when something happens, we'll be there to help you respond and minimize impact.

Virtual Chief Information Security Officer

Chief information security officers (CISOs) are highly sought after and hard to find. And when breaches happen without a CISO in place, your risk multiplies even more. Our virtual CISO service lets you call on highly qualified and experienced security professionals. They act as an extension of your team. They understand your business strategy and engage with you on a regular basis. In addition to reducing risk, they can implement the controls you need to meet compliance standards. Our virtual CISOs also have access to our in-house team of hacking experts, SOC analysts and auditors. This gives you the benefit of having a dedicated cybersecurity team without the big investment.

Security Assessments

Cyber criminals are constantly evolving. By working with us, you can proactively expose security weaknesses before they do. We use well-known compliance frameworks and best practices such as NIST 800-53a, ISO/IEC 27001 and the OSSTMM.

Discovery

We work with you to assess the best ways to connect people, applications and devices securely and efficiently.

Technical Assessment

We use several methods to identify security architecture gaps, configuration problems and vulnerabilities.

Reporting

Beyond executive summaries with recommended fixes, we develop reports tailored to your business and your unique risks.

Managed Security Services

In addition to proactive assessments, our managed security services are designed to identify, mitigate and address threats in four ways:

Asset Discovery and Monitoring

Know who and what is connected to your environment at all times.

Behavioral Monitoring

Identify atypical or suspicious behaviors across your mobile and on-premise workforce and application workloads.

Vulnerability Assessment

Find and remediate your vulnerabilities before an intrusion.

Customer Success Managers

Get added support that ensures successful outcomes including add-ons like VCISO and security assessments.

We'd love to hear from you.
