Tailored Cisco Identity Services Engine

anm

The demands on your network are intensifying.

Increasing mobility, digital collaboration and device proliferation are exposing security vulnerabilities and increasing the complexity of defining, monitoring and controlling network access.

Consider this: Gartner predicts 20.4 billion connected devices by 2020. Business Insider triples that forecast just five years later with 64 billion connected devices expected by 2025.

MANAGE RISK FROM EVERY ANGLE

Securing data and keeping it private is one of our industry's most complex challenges. You are tasked with driving productivity, collaboration and remote access, but what about the risks? How do you embrace innovation and cloud-based technologies that create a data-centric security program? We understand these pressures. That's why security isn't just a service we offer — it's part of everything we do.

Cisco Identity Services Engine (ISE) simplifies your network by automating security and access policies for endpoint devices connecting to your company's network. This network admission control solution provides deep visibility into the users and devices accessing your network, no matter how they connect: wired, wireless and VPN. ISE provides context-based access management and an ability to segment the access layer dynamically using TrustSec.

WHAT SETS US APART

› Certified Cisco Gold Partner, Master Security Specialization
› Extensive networking expertise
› Customized ISE assessment and use case development
› Complete (versus sample size) scenario testing before ISE goes live
› Local, personalized service and support

WHAT YOU CAN EXPECT

› Secure business and context-based network access
› Centralized network access administration
› Enhanced network visibility
› Automatic, self-service device on-boarding and automated device-compliance checks
› Ability to enable software-defined access (SDA)
› Subscription licensing accuracy

Tailored Cisco Identity Services Engine

Questions to consider

› Do (or will) you have a bring-your-own-device policy?

› Are you looking to simplify and automate network access?

› Are you able to isolate threats with network segmentation?

› Are you looking to implement zero trust architectures?
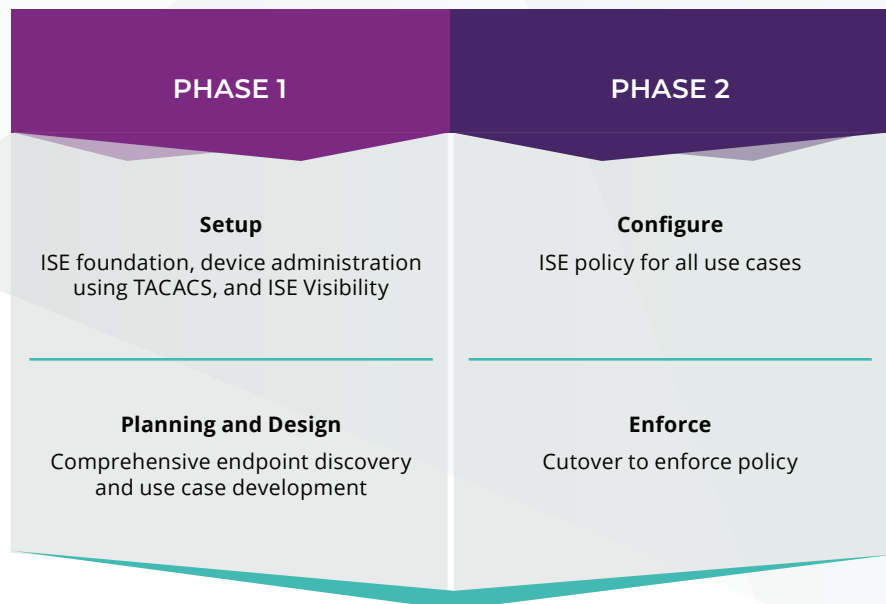

Cisco Partner
Gold Certified

As a Cisco Gold Certified Partner, ANM specializes in Cisco ISE assessments and implementations. We perform customized health checks and develop use cases based on your business needs. Unlike other technology partners, we examine all device and access scenarios – not just a sample size – ensuring that your network is set up for secure, efficient productivity.

ANM's approach

Our phased approach begins with a comprehensive assessment and discovery process, defining complete use cases based on both IT and business needs. We then customize the configuration and provide complete documentation to empower your team post go-live, with optional managed services to outsource your network support as needed.

PHASE 1	PHASE 2
Setup ISE foundation, device administration using TACACS, and ISE Visibility	**Configure** ISE policy for all use cases
Planning and Design Comprehensive endpoint discovery and use case development	**Enforce** Cutover to enforce policy

ONGOING ANM MANAGED SERVICES

ISE HEALTH CHECK

ANM's ISE Health Check service is a low-cost engagement to help customers understand where their current ISE installation stands. ANM's ISE experts will meet with you to uncover your requirements and identify any short-term remediations. ISE Health Checks and Readiness Assessments provide clients with solid ground to begin an ISE expansion.
