

ANM Insights - Assessment

Network Infrastructure

In today's fast-moving environment, keeping your major systems resilient, efficient, and secure can mean the difference between staying ahead of problems or becoming a victim to them. ANM Insights is designed to assess and identify potential problems in a proactive manner. Gain Insights from ANM's collective engineering experience and tool sets to help you make the most out of (and the least pain from!) your environment.

Solution Overview

ANM Insights: Network Infrastructure provides an assessment of your network environment designed to aid in device discovery and inventory, but more importantly, pinpointing performance problems, security vulnerabilities, and crucial lifecycle milestones of your critical infrastructure. Problems identified early are problems you can remediate before it's too late.

This assessment is highly automated and utilizes ANM's best of breed tooling so it can be deployed rapidly, without weeks of setup process.

This assessment will allow you to:

- › Know what equipment is in use and what is not, to save on maintenance costs
- › Gain visibility into which of your Network Operating Systems have high-priority security vulnerabilities so these items can be quickly remediated
- › Pinpoint device performance and health issues that are degrading user experience
- › Identify what equipment is nearing crucial lifecycle milestones, to start advance planning for upgrades and replacement – stay ahead of the global IT supply crunch!
- › Determine the maintenance coverage of your critical devices to make sure they are appropriately covered
- › Understand the state of your Cisco licensing to ensure assets are being properly operationalized and not expensive shelf-ware
- › Gain insight into your Software Defined Networking (SDN) controllers such as Cisco Meraki, Application Centric Infrastructure, Cisco SD-WAN, and DNA Center

Deliverables of the ANM Insights: Network Infrastructure include a report which summarizes all findings, as well as a list of all discovered devices and their respective details. The service also includes a briefing led by an ANM Expert which focuses on key findings and recommendations to improve your environment, both in the short and long term. Where possible, the briefings will go beyond device level detail and into overall architecture considerations/recommendations.

WHAT SETS US APART

- › ANM is one of the top network infrastructure providers in the country with a long history of expertise in a variety of standards based network technologies. Our team takes an engineering led approach to problem solving, highlighted by our 6:1 engineering to sales ratio.
- › In addition, ANM is a Cisco Gold Partner and is one of a select few partners that hold Cisco Masters Certification in Enterprise Networking, Collaboration, Data Center, and Security.
- › Unlike many other solution providers, our goal is to proactively identify areas of opportunity in your environment via assessment, as opposed to starting with a product searching for a problem.

FOLLOW-ON SERVICES

- › ANM has several in-depth follow-on advisory services that address a broad range of challenges across the entire network, data center, cloud, and security technology ecosystems. Whether you are planning a Software Defined Networking (SDN) implementation, network refresh, security segmentation strategy, or data center consolidation or move, ANM can help guide you through the complexities of planning and rollout.

We'd love to hear from you.
