

## Data Integrity: Securing Data Protection Systems

Constant threats of destructive malware, ransomware, malicious insider activity, system failure and even honest mistakes create the imperative for organizations to be able to quickly recover from an event that alters or destroys data. Your organization must be confident that they can recover data within identified SLAs while maintaining data integrity and making sure that recovered data is accurate, complete, and free of malware.

This half-day workshop covers data protection from a security-centric view to help your organization understand potential risks and remediations to protect the ability to restore data. This includes discussions around your storage, data protection platform, disaster recovery and the security around these systems.

### Who is the intended audience:

Data Center teams responsible for storage, data protection, and disaster recovery.

### Agenda for this 4 hour workshop:

- › Security and Data Integrity Concepts
- › Best Practices for Hardening and Securing Data Protection Systems
- › Recovering Data, more than just restore
- › Recovery scenario tabletop exercises

### Deliverables:

At the end of the workshop, ANM security team will provide:

- › PowerPoint documenting key findings
- › Gap analysis and associated priority list

Alongside the documentation delivery, we will schedule a debrief session to review the findings together.

### WHAT SETS US APART

- › ANM is one of the top data center providers in the country with a long history of expertise in VMware, networking and data center operations. Our team takes an engineering led approach to problem solving, highlighted by our 6:1 engineering to sales ratio.
- › ANM is highly certified and experienced across the major BC/DR and security players, including Commvault, Cohesity, Rubrik and Veeam
- › Unlike many other solution providers, our goal is to proactively identify areas of opportunity in your environment via assessment, as opposed to starting with a product searching for a problem.

### FOLLOW-ON SERVICES

- › ANM has several in-depth follow-on advisory services that address a broad range of challenges across the entire data center, cloud, and security technology ecosystems. Whether you are planning a cloud migration, disaster recovery strategy, data center consolidation, or move, ANM can help guide you through the complexities of planning and rollout.

We'd love to hear from you.
