BREACHES ARE INEVITABLE. DAMAGE ISN'T.

Security complexity is at an all-time high. Organizations manage 83 security tools on average, yet breaches, misconfigurations, and alert fatigue persist. The problem isn't the technology itself, but the fragmentation between tools, architecture, and operations that creates chaos faster than teams can manage it.

ANM solves this through strategic assessment, architecture design, and implementation that reduces complexity while increasing security capacity across your environment.

HOW ANM IS DIFFERENT

- » We lead with discovery, not demos
- » 30+ years of experience and 175+ engineers at your fingertips
- » Customized workshops and assessments
- » You get what's right for your organization, not what's easiest for us to sell

OUR APPROACH

Engineering a Better Reality

ANM brings 30+ years of solving complex infrastructure challenges to help you get full value from the security investments you've already made. We engineer solutions around your reality through strategic assessment, architecture design, and hands-on implementation.

Most vendors charge \$10,000+ for security workshops and assessments. ANM provides many of these at no cost because understanding your environment is a prerequisite to designing effective solutions.

TECHNOLOGY PARTNERS

ANM works with industry-leading providers, including Cisco, Palo Alto Networks, Splunk, Microsoft, Crowdstrike, Varonis, Netskope, and many more.

Comprehensive Cybersecurity Capabilities

IDENTITY & ACCESS MANAGEMENT

- **Technical components:** SSO, MFA, PAM, IGA, ITDR, machine identity management
- **What we deliver:** Unified identity governance with automated lifecycle management and controls for human and machine identities, including APIs, service accounts, and AI agents

MANAGED DETECTION & RESPONSE

- **Technical components:** 24/7 monitoring, threat hunting, incident response
- **What we deliver:** Vendor-independent MDR selection matched to your risk profile

NETWORK SECURITY & SASE

- **Technical components:** Hybrid mesh firewall, SASE/SSE, SD-WAN, ZTNA
- **What we deliver:** Integrated network security across on-prem, cloud, and hybrid environments with centralized policy management

CLOUD & DATA SECURITY

- **Technical components:** CNAPP, CSPM, DLP, CASB, inventory classification and protection, machine identity access control and privilege management
- **What we deliver:** Unified cloud security and data protection across multi-cloud environments

SECOPS VISIBILITY & TOOLING

- **Technical components:** SIEM, SOAR, XDR, attack surface management
- **What we deliver:** AI-driven security operations platforms with reduced alert fatigue and faster response times

ADVISORY SERVICES

- **Technical components:** Pen testing, tabletop exercises, security program review
- **What we deliver:** Strategic guidance to optimize investments and evolve governance practices

SECURE. CONNECT. TRANSFORM.

Cybersecurity Solutions Delivery with ANM

Assessment & Workshop

Cybersecurity Assessment

We evaluate your organization's current security posture against industry-leading frameworks such as NIST CSF. Our assessment identifies vulnerabilities, gaps in coverage, and strategic recommendations to enhance your defenses.

Cyber-Resilient Architecture Workshop

Our interactive workshop brings your security, network, and cloud teams together to:

- Review cyber resilience fundamentals and how disaster recovery has evolved
- Discuss data integrity and protection concepts
- Evaluate your current IT DR and cyber-resilience capabilities
- Map technology investments to business outcomes

Deliverables: Solutions mapped to use cases, prescriptive recommendations for high-value impact, and a strategic roadmap.

Architecture Design

We design an integrated security architecture tailored to your infrastructure:

- Security architecture blueprints showing how capabilities work together
- Platform selection strategy aligned to your operational requirements
- Integration architecture that connects existing tools with new capabilities
- Phased roadmap for implementation without operational disruption

This documentation accounts for your constraints, legacy systems, and business requirements.

Implementation & Consulting

ANM brings 175+ engineers to deploy security solutions with hands-on expertise across all six capabilities. We deploy 6 engineers for every salesperson, which means deep technical expertise on every project.

- We focus on integration to make disparate platforms work as one.
- Optimization is always our goal, so you get full value from your platforms, not just working installations.
- We support knowledge transfer with end-user adoption and training, ensuring your team can operate and maintain solutions.
- Every deployment is tailored to your operational constraints and legacy infrastructure.

We implement what we architect, stay through completion, and ensure your security investments deliver the outcomes you expect.
