

Advisory Services

WE HELP YOU ASSESS, ALIGN, AND ACT ON YOUR PRIORITIES.

Modern enterprises are investing heavily in digital transformation, but much of that investment is landing in fragmented technology environments. Organizations now manage dozens, often more than 80, IT and security tools across nearly 30 vendors, creating silos and blind spots rather than a streamlined capability.

Fragmentation also bleeds into productivity and resilience. Maintaining disconnected tools can slow threat detection and incident response by months, overwhelm teams with context switching, and contribute to burnout and turnover. The issue isn't the technology itself, but how these technologies are selected, integrated, and governed.

ANM's Advisory Services offers strategic assessments and workshops that help you assess your tech stack so you can plan, prioritize, and scale with confidence.

WHAT SETS ANM APART

- » Many providers lead with products. We lead with insight. We believe technology should serve strategy, not the other way around, and we bring over 30+ years of deep, hands-on expertise to help you make smarter, faster, and better-aligned IT decisions.
- » Multi-disciplinary teams with real-world implementation experience
- » Certified partnerships with Cisco, Microsoft, Palo Alto, VMware Broadcom, and more
- » Regional presence with national scale
- » SOC 2-compliant processes that prioritize security and accountability

Strategic Assessments

We specialize in hybrid and multi-cloud environments, including deep Azure assessments that examine network architecture, compute, storage, FinOps, and more. Every assessment includes an executive summary of findings, an architectural overview, domain-specific risk identification, categorized and prioritized recommendations, FinOps observations where applicable, and a clear roadmap aligned to business outcomes.

ASSESSMENT	WHAT WE DO	WHAT YOU GET
Business Continuity & Disaster Recovery (BCDR)	- Evaluate RTO/RPO, failover, and DR automation readiness - Identify single points of failure	- Gap analysis aligned to business continuity priorities - Actionable recovery improvement plan
Cloud	- Assess hybrid/multi-cloud architecture - Analyze costs, governance, and scalability	- Optimization report - Architecture + remediation recommendations
Cybersecurity	- Surface risks across identity, access, and endpoint layers - Benchmark against NIST CSF, CIS Controls, or ISO	- Custom risk profile - Prioritized remediation actions and Zero Trust alignment
Data Center & Infrastructure	- Diagnose compute, storage, and virtualization health - Review Cisco UCS and VMware Broadcom configurations	Platform modernization roadmap
Data Classification	- Scan and classify data - Detect exposure risks	- Data risk report - Remediation plan to improve governance
Network	- Analyze routing, segmentation, QoS, and WAN/LAN performance - Document architecture + performance gaps	- Topology analysis - Design recommendations to improve efficiency + resilience
Readiness Assessments	- Evaluate current state maturity - Assess processes, tools, and staffing alignment	- Gap analysis and maturity scoring - Prioritized roadmap to accelerate modernization
Risk Assessments (NIST Cybersecurity Framework)	- Map cybersecurity posture to NIST CSF - Identify control gaps and risks across all functions	- Risk heatmap and maturity score - Prioritized investment + remediation plan

Engineering-Led Workshops

Collaborative, guided sessions that bring stakeholders together to align priorities, explore capabilities, and co-create a plan. Every workshop concludes with clear next steps and a tailored roadmap.

WORKSHOP	WHAT WE DO	WHAT YOU GET
AI Readiness	- Evaluate your current infrastructure, data estate, governance, and operational maturity - Identify gaps and build a phased strategy tailored to your business	Governance framework, defined roles, evaluation criteria, operational workflows, and a phased roadmap
Cyber Resilience	- Assess data protection, backup, and recovery capabilities - Identify vulnerabilities and map improvements to real-world threats	Prioritized recommendations to strengthen your resilience and recovery
Zero Trust	- Assess your Zero Trust maturity and access control posture - Identify gaps and build a roadmap for implementation	A roadmap aligned to NIST or CISA ZT frameworks
Microsoft	Workshops tailored to Teams, M365, Copilot, Defender, Entra	Hands-on evaluation and roadmap specific to each Microsoft solution
Tools Rationalization	- Analyze current tools for overlap, risk, and alignment with NIST-CSF - Identify opportunities to streamline and optimize investments	Inventory, gap analysis, and roadmap to improve coverage and reduce cost
Identity & Access Management	- Evaluate the current IAM landscape across directory services, SSO, MFA, and conditional access - Identify risks, misalignments, and modernization needs	Current state assessment, risks, and roadmap for secure, scalable identity management

Strategic Conversations. Actionable Outcomes.

Our process begins with assessments and workshops designed to uncover opportunities in your environment, so every recommendation serves a clear purpose, not a sales agenda. We'll help you evaluate new technologies, align decision-makers, and shape a strategy grounded in business outcomes.

Shared understanding of current gaps and goals

Cross-functional alignment across business and IT

Defined next steps, deliverables, and ownership

Confidence to move from discussion to decision

Let's Explore What's Possible Together.
