Cabling & Special Systems

anm°

CONSTRUCTED FOR PERFORMANCE. READY TO SCALE.

Every modern IT, security, and facility system depends on one thing: infrastructure that's built to last. Yet cabling and physical layer decisions are still too often rushed, outsourced, or treated as an afterthought.

The result: downtime, failed audits, costly outages, poor user experiences, and systems that can't evolve.

ANM delivers end-to-end cabling and special systems solutions that are documented, certified, and ready to support security, mobility, and modernization at scale.

HOW ANM IS DIFFERENT

- » Meet stringent compliance standards and manage critical infrastructure with confidence. Our teams are cleared, credentialed, and experienced in delivering high-performance systems across facilities.
- » Dedicated cabling and systems architecture teams
- » Documentation and test reports provided at project closeout
- » No subcontractors, just full-time, credentialed installers
- » Deep expertise in regulated environments

CERTIFICATIONS

- » Registered Communications Distribution Designers (RCDD) on staff
- » BICSI Installer II Copper, and Fiber, Technicians TE-350
- » Leviton
- » Siemon Cabling

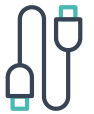

OUR APPROACH

Design-Led, Not Install-Led

Our cabling and systems solutions are design-led to ensure we get it right the first time. We don't just install—we engineer, manage, and document every layer.

Cabling & Special Systems Solutions

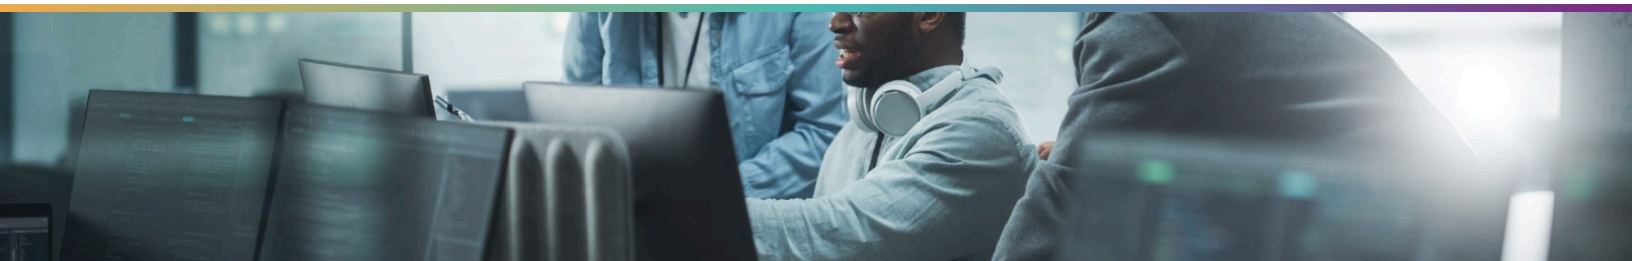

Prepare your organization for growth with structured cabling, fiber, and physical security that scales. We streamline rollouts across locations and standardize infrastructure for easier support and expansion.

WHAT WE DELIVER	CAPABILITIES
STRUCTURED CABLING	• Low-voltage cabling, CAT6/CAT6a, and fiber installed to TIA/EIA and BICSI standards. • Designed for high-speed data, PoE devices, VoIP, and Wi-Fi 6/6E in modern hybrid environments.
FIBER OPTIC INSTALLATION & SERVICE	• High-speed broadband through GPON solutions that consolidate services and eliminate access/distribution switches
CABLE TESTING & CERTIFICATION	• Every install verified to ANSI/TIA-568 and NEC standards. • As-built documentation, test results, and labeling to support audits, lifecycle support, and handoffs to in-house teams.
IT RACK REORGANIZATION & LABELING	• Reorganize and document racks, patch panels, and cross-connects • Simplify moves/adds/changes and reduce MTTR.
PHYSICAL SECURITY INTEGRATION	• Power and integrate cameras, access control, sensors, alarms, and intercoms over a shared, resilient backbone • Aligned with your IT architecture.

PURPOSE-BUILT FROM THE GROUND UP

Poor cabling doesn't just slow you down. It can cost hundreds of thousands of dollars in rework and expose you to failed audits or access control breakdowns. We help clients replace reactive installs with a proactive infrastructure strategy by solving common challenges:

- Inconsistent install quality across locations
- Lack of documentation or visibility into cable runs and terminations
- Recabling and rework triggered by poor planning or short-term thinking
- Fragmented security systems that don't integrate with the IT network
- Downtime, audit gaps, or access failures caused by aging or misconfigured cable plants

Our Approach

- **Site Design & Planning:** Campus surveys, cable routing maps, MDF/IDF layout, and capacity planning.
- **Project Management:** Phased rollouts, after-hours and weekend work, and coordinated construction schedules to minimize disruption.
- **Scalable Standards:** Design and install to enable centralized management and consistency across multi-site environments.
- **Certified Installation Crews:** Full-time, licensed installers with RCDD and BICSI II certifications. Experienced in schools, medical centers, and branch environments.
- **Lifecycle Documentation:** Labeling, cable schedules, schematics, and certification reports to support long-term service and audits.

Tailored for Your Environment

Education

Keep students safe and schools connected with infrastructure built for learning. We deliver secure, standardized cabling and integrated physical security that meets E-rate and ESSER funding requirements and scales without disrupting classrooms.

Healthcare

Support clinical uptime and patient safety with low-voltage systems engineered for reliability. We design and install systems that serve electronic medical records, access control, and real-time monitoring across live care environments.

Financial

High-performance infrastructure engineered for uptime, speed, and audit-readiness. Supporting everything from real-time trading to secure branch connectivity and compliance-heavy environments.

Public Sector & Government

Experienced in local and state RFP/RFQ processes, public safety DAS, and FedRAMP security alignment.

Verkada Security, Backed by ANM Expertise

As a Premier-Level Verkada Partner, ANM implements cloud-managed physical security systems with precision and speed. Our teams design, deploy, and support Verkada solutions across:

- Video surveillance with AI-enabled search
- Access control with secure credentialing
- Environmental sensors and alarms
- Unified management dashboards and reporting

Cabling is Fundamental. We Make it Strategic.

ANM delivers more than clean installs. We align infrastructure with your IT, security, and operational goals.
