SECURITY

Cybersecurity Platformization

STRATA — PRISMA — CORTEX

Security complexity is at an all-time high. Organizations now average more than 30 security tools across the stack, and yet breaches, misconfigurations, and alert fatigue persist. The root problem? Siloed tools create gaps, slow response times, and drain resources.

Platformization flips that model. By consolidating security capabilities into an integrated platform.

WHAT SETS US APART

As a trusted Diamond Innovator Palo Alto Networks solution provider, ANM brings the real-world expertise to turn vision into execution. We don't just sell the platform—we help you build a security strategy around it.

Our team of engineers, architects, and consultants deliver the practical services you need to consolidate your stack, reduce complexity, and improve your security posture.

KEY BENEFITS

- Improve efficacy by reducing blind spots and aligning controls
- Shrink the attack window with automated, coordinated responses
- Increase agility by scaling capabilities as business needs evolve
- Lower operational costs through unified management and automation
- Make better decisions with shared data, context, and analytics

In short: platforms are the foundation for modern, efficient, and effective cybersecurity.

ANM helps organizations adopt Palo Alto's industry-leading platform—Strata, Prisma, and Cortex—to break down silos and take control of security operations.

Our Platformization Services

NETWORK SECURITY

Secure your entire network—on-prem, cloud, and everywhere in between.

- Hybrid security architecture: NGFW, SASE/SSE, ZTNA
- Cloud firewall deployment and policy unification
- AI-driven threat detection and prevention
- Container-aware traffic inspection
- Zero Trust implementation and enforcement
- Centralized policy and traffic visibility across sites and users

CLOUD SECURITY

Protect apps and data across your cloud-native ecosystem.

- CNAPP deployment for end-to-end cloud protection
- CSPM for misconfiguration detection and remediation
- CWP across containers, VMs, and serverless
- IAM assessments and identity risk analysis
- Web app and API protection with inline controls
- DevSecOps integration for shift-left security and code scanning

SECURITY OPERATIONS

Unify and accelerate your SOC with automation and intelligence.

- XDR for cross-domain threat detection and response
- XSOAR for playbook-driven incident response and automation
- Xpanse for external attack surface discovery and monitoring
- SIEM tuning, log optimization, and alert deduplication
- Integration across the Palo Alto stack and third-party tools
- SOC assessments, maturity models, and roadmaps
- Continuous tuning and AI-driven triage workflows
- Measurable efficiency gains and MTTR reductions
