

SD-WAN & SASE Services

Modern networking is a journey, from connectivity to security.

Legacy WANs weren't built for the world we live in today. Cloud adoption, hybrid work, mobile users, and constant security threats are stretching traditional architectures beyond their limits. IT teams that once relied on MPLS and rigid networks now find themselves facing mounting costs, unpredictable application performance, and limited visibility into how traffic flows between branches and the cloud.

At the same time, the attack surface has expanded. Remote and edge environments often lack consistent security, leaving organizations exposed. Layer on the complexity of managing separate networking and security stacks, and it's no surprise that many teams are spending more time troubleshooting than moving the business forward.

WHAT SETS US APART

- » **Engineering-first DNA:** 6 engineers per salesperson = unmatched expertise
- » **30 years strong:** Proven success across industries and regions
- » **Customer-first culture:** Big enough to deliver, small enough to care

ANM SERVICES

- » **Assessments & Roadmaps** – Map out your SD-WAN to SASE journey
- » **Design & Architecture** – Engineer a solution aligned to your goals
- » **Implementation & Integration** – Smooth deployments with minimal disruption
- » **Lifecycle Services** – Ongoing optimization, monitoring, and support

ANM guides organizations through this journey. We bring real-world experience designing and deploying SD-WAN, then layering in SASE to deliver consistent, scalable security.

The Journey: From SD-WAN to SASE

STEP 1: SD-WAN FOR CONNECTIVITY & PERFORMANCE

- Optimize traffic with application-aware routing
- Replace or supplement MPLS with broadband, LTE, and 5G
- Gain centralized control, faster deployments, and real-time visibility

STEP 2: SSE FOR INTEGRATED SECURITY

- Extend protection everywhere users connect, not just in the branch
- Converge networking and security into a single framework
- Enforce Zero Trust policies based on identity and context
- Leverage cloud-native scale to secure SaaS, IaaS, and hybrid environments

Together, SD-WAN and SSE create a comprehensive SASE solution to provide a resilient, secure, and future ready network.

STRATEGIC PARTNERSHIPS

We work with leaders in the SD-WAN & SASE space, including:

- **Cisco** – Cloud-first WAN with AI-powered security
- **Palo Alto Networks** – Prisma SD-WAN and Prisma Access for SASE
- **Fortinet** – Security-driven WAN and fully integrated SASE capabilities
- **HPE Aruba** – EdgeConnect SD-WAN and unified SASE for secure, cloud-ready networking

Your Journey Starts Here

Let's start a conversation about where your network is today and how ANM can help you take the next step toward a modern, secure future with SD-WAN and SASE.
