

Patching as a Service

SECURING WHAT MATTERS MOST

AI Is Creating Exploits Faster Than Your Team Can Patch Them

Attackers now weaponize newly disclosed vulnerabilities in days, not months, and AI is shrinking that window further. Monthly patch cycles and manual triage were built for a slower threat landscape. For most IT teams, the gap between disclosure and remediation is where breaches happen.

5 Days

Median time from public disclosure to active exploitation

1 in 3

Vulnerabilities exploited on or before the day they're disclosed

200+ Days

Average time organizations actually take to patch

THAT GAP IS YOUR ATTACK SURFACE

The ANM Solution: Managed Vulnerability & Patch Management

ANM identifies, prioritizes, and deploys patches, closing critical exposures across your environment on a continuous basis, backed by defined remediation SLAs, not best effort.

Deep Expertise

Decades of experience across complex, regulated, and hybrid IT environments.

Risk-Based Prioritization

Exposures ranked by real-world exploitability, not just a CVSS score.

SLA-Backed Remediation

Patches deployed on defined timelines, measured in days, not quarters.

Proof You Can Show

Clear reporting for auditors, cyber insurance, and leadership reviews.

SECURE. CONNECT. TRANSFORM.

A Flexible Model that Meets You Where You Are

USE YOUR TOOLS

ANM operationalizes your existing patching platform, protecting your investment and leveraging your current licenses.

USE OUR TOOLS

If you need a platform, ANM brings enterprise-grade tooling that is fully managed, maintained, and supported by our team.

INTEGRATE BOTH

ANM integrates our platforms with yours, creating a unified view across tools, teams, and environments.

Ready to close your patching gap?

Contact your ANM Client Success Manager, or visit anm.com to schedule a patching assessment.
